

Tips and reminders for internships

Daily reminders

1. At the beginning of class, pull from the upstream Git repository. This will “sync” any files we need for that day.
2. At the end of the day, save your changes with Git and push to your online repository. This keeps your files up to date.
3. Fill out the online feedback form [here](#). It is also pinned to our Slack channel. Your feedback is really useful to me as I plan our internship sessions.

Tips

1. If you're looking for any labs or documents, check out <https://github.com/amnh/BridgeUP-STEM-Oceans-Six>. The schedule on the README will be kept updated with any links you might need.
2. If you're stuck when coding...
 - a. Talk about it with a partner!
 - b. Ask other teammates for advice!
 - c. Copy and paste the error message into Google! It's likely that someone else has had the same issue.
